# Leading COM Express®
# Most Robust, Best Support

## ADLINK COM Express® DNA

In today's global economy, companies are faced with the necessity of an ever faster time to market for their products while also facing increasing pressures to reduce costs. For decades, ADLINK's market-proven COM Express® products have been at the forefront of satisfying customers' demands by offering tighter system integration across company domains. Our focus has always been on our core values as industry leaders to maintain the highest quality in product quality and longevity, while at the same time pushing the boundaries of product innovation through improvements to edge production and logistics, and continuing customer support, not to mention our unparalleled commitment to standardization within the industry. Take a closer look at how our COM Express product DNA helps ensure your company's continuing success.

### Leading

Being one of the world's leading vendors of COM Express products, ADLINK continuously moves forward with development and innovation. Our COM Express modules are equipped with several APIs which can remotely extract key information and configure functions including power sequence, failsafe dual BIOS, watchdog timer, as well as perform predictive maintenance. Additionally, to meet the needs of IIoT applications, we provide API extensions that enable edge and cloud operability, as well as firmware that is better optimized for real-time applications.

ADLINK believes that industry standards enable our customers to focus on their core competencies, accelerate time-to-market, and lower costs. From chairing the COM Express® subcommittees of PICMG, to creating the original PC/104 standard, to working with fellow embedded vendors to develop the SMARC® (Smart Mobility ARChitecture) standard, we lead and actively participate in standards committees to drive innovation and ensure that standards continue to meet our customers' needs.

### Robust

ADLINK's commitment to providing the highest quality COM Express products is evident in every step from their design, to testing, to production. We ensure our COM Express modules will meet robustness requirements for applications operating in the harshest environments with standard MIL specification compliance and mandatory HALT tests.

With the advantage of having its own factories in Shanghai and Taipei, ADLINK is able to deliver COM Express modules with the highest quality control in a secure supply chain. And, to support your ongoing production needs, our COM Express product lines are designed with embedded long-life parts to ensure that standard boards can be produced with only minor changes for 7 to 10 years with a fixed BOM to end users. When changes are necessary, we provide advance notification and guidance through the transition to new hardware or BIOS revision.

Our key involvement in setting industry standards enables us to provide new products and roadmaps that enable a smooth resolution to end-of-life (EOL) migration issues. ADLINK's product longevity processes apply not only to standard product lines but also for our OEM/ODM customers.

Moreover, our regional logistics, operations and quality support centers, located in Europe, US, Japan and China, enable us to deliver and support products worldwide within tight schedules.

### Support

ADLINK is an international company serving customers around the globe with branch offices and design centers in Asia (Taiwan, Japan, Korea and China), North America, and Europe (Germany, France and the UK). Our worldwide presence allows us to provide pre-sales technical consultations, local carrier board design services, and support in your local language and time zone.

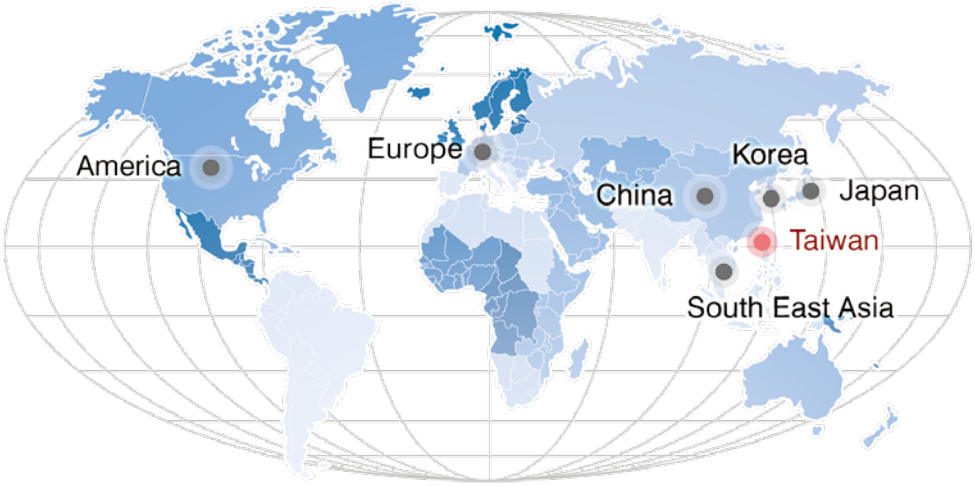

At our headquarters in Taiwan, our SI lab is available to customers for carrier board verification to ensure signal integrity during the design cycle, and performance optimization prior to prototyping and testing. In addition, ADLINK also provides software, firmware and customized BIOS support for its COM Express products to help customers accelerate their project schedules and shorten time-to-market. Our success history and experience in industrial and embedded computing has allowed ADLINK to become a Premier Member of Intel® Internet of Things Solutions Alliance. Our close partnership with Intel allows us to deliver COM Express products with the latest technologies and solutions for customers.

*Customized carrier board design service*

## Conclusion

To keep you ahead in this competitive world, ADLINK provides robust COM Express® products that have passed Highly Accelerated Life Testing (HALT), making your products a compelling choice. Our modules integrate smoothly into your systems and function as you require and expect. We offer to customers local carrier board design services or carrier board design verification as needed. We also provide software, firmware, and BIOS adaptation services to suit your specific requirements. Quality technical support is critical to product development, and our customers get the benefits of ADLINK's local and global network of support centers in all major regions.

ADLINK's COM Express products are not only leading edge when it comes to quality and standardization, they're packed with design innovations and backed up by top-class production and manufacturing logistics that ensure timely delivery and distribution to you, as ordered, when needed. To ensure lifetime stability of your products, we provide EOL management that provides long production service durations.

We play a major role in the PICMG consortium and have made significant contributions in defining COM Express and other standards. With ADLINK as your partner in COM Express products, our commitment to lead the industry and produce the most robust products is backed by our comprehensive support network. Choose ADLINK COM Express to ensure the success of your venture from start to finish.
